

CropSage Farm Profile Inputs

Farmer-provided information used alongside FortyGuard, NASA POWER, and USDA SSURGO evidence. Only location and planting time are mandatory; unknown optional values lower confidence instead of being treated as matches.

Information	Required?	Source	Status
Latitude and longitude	Yes	Farmer selects a map pin, GPS position, or demo farm	Source finalized
Planting date or month	Yes	Farmer	Source finalized
Irrigation availability	Important; may be unknown	Farmer	Source finalized
Irrigation reliability	Recommended	Farmer: reliable, limited, seasonal, or unreliable	Source finalized as farmer input
Well pumping capacity	Only when relevant	Farmer, well record, or irrigation-system documentation	No automatic API selected
Canal allocation or capacity	Only when relevant	Farmer or local irrigation district	No automatic API selected
Known soil texture	Optional override	Farmer or soil-test report	Source finalized as optional input
Laboratory pH	Optional override	Soil laboratory report	Source finalized as optional input
Current soil moisture	Optional for general ranking; important for plant-now advice	Farmer observation, sensor, or future API	No source selected yet
Recent rainfall known by farmer	Optional	Farmer or farm rain gauge	Optional manual source
Farm boundary or polygon	Optional	Farmer draws it on the map	No parcel-data provider selected
Farmer's goal	Optional	Farmer	Source finalized

MVP recommendation: collect location, planting month, and irrigation status in the initial form. Request well or canal capacity only for water-intensive crops or when the farmer reports limited irrigation. A laboratory soil result should override mapped SSURGO evidence.
